

Landing Zone

What is it about?

The **Landing Zone Quickstart Package** provides the base functionality to automate the account provisioning and life-cycling. Based on your requirements regarding agility, compliance regulations, existing tool suite and other preferences, we support different solutions so that accounts can be centrally managed and rolled out according predefined templates.

Why do i need this?

- I must manage multiple accounts which is **error-prone** and **inconsistent**
- I don't have any account deployment and life-cycling **automation**
- I don't know which **landing zone solutions** fit my needs best
- I neither have **time nor money** to implement my own Landing Zone solution
- I don't use **Infrastructure as Code** (IaC) account-wide to manage the cloud infrastructure
- I need **too much time** to roll out new accounts preconfigured according to certain standards.
- I don't have any **central pane of glass** to manage multiple accounts

What do i get?

- **Implementation** of the landing zone solution which suits you best (AWS Landing Zone, AWS Control Tower, Amanox Account Management. Framework)
- Increased **business agility** by using an automated and centralized solution to provision new accounts
- Centralized management of all accounts by using **Infrastructure as Code** (CloudFormation, Terraform)
- Continuous and automated roll out of changes via **CICD** pipeline
- **Base templates** to integrate core functionality like auditing, identity federation and centralized billing
- **Knowledge transfer** to operate and extend the landing zone solution

Solution Design and Overview:

There are different solutions on the market to build a so-called landing zone. With each solution, the accounts are managed from a central point. Based on predefined templates the core infrastructure and services are filled and life-cycled.

We support the following solutions:

- **AWS Landing Zone:** AWS provided solution which uses AWS catalogue and CloudFormation.
- **AWS Control Tower:** AWS provided service which uses CloudFormation to centrally manage accounts.
- **Amanox Account Management Framework:** Solution which uses default AWS Services and CloudFormation or Terraform to manage accounts.

At what price and what is the value?

This package contains the following items to provide significant added value:

- Consulting and design of basic account architecture
- Setup and initialization of the landing zone solution of your choice
- Integration and configuration of core templates for auditing, identity federation and billing
- Knowledge transfer for operation and further extension of the landing zone solution

Pricing:

- AWS Landing Zone or AWS Control Tower 20'000 CHF
- Amanox Account Management Framework 30'000 CHF
